Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	40	00:00:00.02	00:00:00.25
Command processing	928	00:00:00.28	00:00:00.83
Pass 1	2094	00:00:11.40	00:00:15.47
Symbol table sort	0	00:00:00.41	00:00:00.46
Pass 2	461	00:00:02.98	00:00:06.71
Symbol table output	2	00:00:00.10	00:00:00.72
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	11	00:00:01.87	00:00:02.98
Assembler run totals	3541	00:00:17.07	00:00:27.43

The working set limit was 4000 pages.
592604 bytes (1158 pages) of virtual memory were used to buffer the intermediate code.
There were 80 pages of symbol table space allocated to hold 1075 non-local and 443 local symbols.
4122 source lines were read in Pass 1, producing 114 object records in Pass 2.
57 pages of virtual memory were used to define 42 macros.

Macro library statistics

                        0000     59 ;               AND FIX CANTIM TO BE ABLE TO CANCEL SPECIFIC TIMERS
                        0000     60 ;         08    Fix residual time in WAITMS to return correct value
                        0000     61 ;               Roger Riggs     11-Jun-1979
                        0000     62 ;         09    Revamped timer interrupt service to fix bug caused
                        0000     63 ;               by lowering IPL from 18 to 7 in calling SCH$QAST
                        0000     64 ;               when delivering timer requests. Also EXE$SETIMR
                        0000     65 ;               was affected, since the queue is now sorted by completion
                        0000     66 ;               time
                        0000     67 ;               Roger Riggs     20-NOV-1979
                        0000     68 ;         10    Remove W^ from several references
                        0000     69 ;               Roger Riggs, 24-Jan-1980, Version 5.2
                        0000     70 ;         12    Removed Errsup after clock overflow in WAITUS, since
                        0000     71 ;               it is unnecessary and means that we loaded the clock
                        0000     72 ;               with a value that will overflow before we can check it.
                        0000     73 ;               Also added DS$GK_USOVR, used by WAITUS and defined
                        0000     74 ;               in ONLY7xx for each processor, Expermentially determined
                        0000     75 ;               to produce an accuracy of about 1%.
                        0000     76 ;               Also added clear of overflow bit to clock interrupt service
                        0000     77 ;               Roger Riggs, 27-Feb-1980
                        0000     78 ;         13    Changed DSBINT to SETIPL(#18) before removing entries from
                        0000     79 ;               timer queue, Also restore IPL before continuing.
                        0000     80 ;         14    Assured that Both SETIMR and CANTIM are executed in KERNEL mode
                        0000     81 ;               Roger Riggs, 22-july-1980, Version 5.5
                        0000     82 ;         15    Moved EXE$GL_ABSTIM to ENTRY,
                        0000     83 ;
                        0000     84 ;               Dave Butenhof, 16-oct-1980, version 6.1
                        0000     85 ;         16    Move EXE$GQ_SYSTIME to entry, to make it accessible to drivers.
                        0000     86 ;               Dave Butenhof, 18-feb-1981, version 6.3
                        0000     87 ;         17    Delete SEP psect.
                        0000     88 ;               Dave Butenhof, 25-feb-1981, version 6.3
                        0000     89 ;         18    Fix problem found in queue handling.  REMQUE/INSQUE instructs
                        0000     90 ;               had been emulated.  Restore the queue instructions.
                        0000     91 ;         19    Fix WAITUS bug (Tom Kraus generated fix).
                        0000     92 ;
                        0000     93 ;         20    - Dave Butenhof, 26-Feb-1982, version 6.6
                        0000     94 ;               Add special code in WAITUS for Nebula...use interrupt
                        0000     95 ;               instead of polling.
                        0000     96 ;
                        0000     97 ;         21    - Jack Stansbury, 26-Feb-1982, Version 6.6
                        0000     98 ;               Added .LIBRARY statements for $DS, $DIAG, and $LIB.
                        0000     99 ;
                        0000    100 ;         22    Jack Stansbury, 15-September-1982, Version 6.9
                        0000    101 ;               Changed ICCS$M_ERR from 31 to 15. Also added code in DSI$TimSrv
                        0000    102 ;               routine that will not reset the interval timer if the SetVec routine
                        0000    103 ;               is currently trying to stop the interval timer.
                        0000    104 ;
                        0000    105 ;         23    Jack Stansbury, 16-September-1982, Version 6.9
                        0000    106 ;               Changed the ICCS$M_ERR bit back to #15. The VAX Hardware Handbook
                        0000    107 ;               is wrong in its picture of the ICCS in the back of the book.
                        0000    108 ;
                        0000    109 ;         24    Marion Baggett, 24-Sept-1982,   Version 6.9
                        0000    110 ;               Changed the entry mask in DSX$WAITUS to not save R2, R3. These regis
                        0000    111 ;               are not changed, and the extra time for CALLx to save them should be
                        0000    112 ;         25    Bob Bergazzi    21-Oct-1982     Version 6.9
                        0000    113 ;               Changed DSI$TIMSRV to clear the interrupt when the
                        0000    114 ;               DS$GB_Stopping_The_Timer flag is set. Otherwise we get stuck
```

```
                                    in a loop of continuous interrupts.
                                    ;
                                26  Bob Bergazzi    25-April-1983   Version 6.11
                                    Added global symbol DSX$WAITUS_USOVR to the instruction in the
                                    DSX$WAITUS routine which computes the interval clock count,
                                    so that we can reference it from KERNEL and change the value
                                    of the clock routine overhead factor (DS$GK_USOVR),
                                    if we are running on a SUPERSTAR processor. This is done from
                                    KERNEL during the BOOT procedure so that we don't add any more
                                    instructions to the DSX$WAITUS routine, which would change the
                                    value of the overhead factor for the existing processors.
                                    I.e. The code in KERNEL is modifying the instruction at
                                    DSX$WAITUS_USOVR.
                                    ;
                                27  Bob Bergazzi    May 16,1983     Version 6.11
                                    Changed the order of the .LIB statements.
                                    ;
                                28  Richard Brown   August 4, 1983  Version 6.13
                                    Corrected bug in DSX$CANWAIT.  If this service was called
                                    to cancel a $DS_WAITMS, it did not remove the entry from the
                                    timer queue, so the AST was still being delivered.  Therefore,
                                    the $SETIMR call in DSX$WAITMS was changed so that a request
                                    ID is specified (-1).  DSX$CANWAIT was changed so that it
                                    issues a $CANTIM to kill all timer requests with an ID of -1.
                                    ;
                                29  R.E.Muse        10 January 1984 version 6.14
                                    added PRDEF macro definition - Version 4 changes.
                                    ;
                                30  Bob Bergazzi    Jan. 26, 1984   Version 6.14
                                    Changed CLK$RE_INIT routine to call ONLY_CLOCK_INIT which
                                    does cpu-specific stuff to the TODR.
                                    ;
                                31  Bob Bergazzi    Aug. 24, 1984   Version 7.1
                                    Changed CLK$RE_INIT to not call ONLY_CLOCK_INIT, and also to
                                    write the bias value (10000000) into the TODR, if the TODR
                                    read less than 10000000. This fixes the bug where the EXE$GQ_SYSTIME
                                    was not being re-synchronized if the TODR read less than 10000000.
                                    ;
                                32  M. Baggett      23-May-1985     Version 8.2
                                    Fixed truncation errors caused by adding module ULTRIX
                                    ;
                                33  Domenic Andella 4-Nov-1985      Version 9.1
                                    Add code to DSI$TIMSRV to branch around if Ap.
                                    ;
                                34  Domenic Andella 23-Dec-1985     Version 9.1
                                    Use stack address as argument when getting processor
                                    id in routine DSI$TIMSRV, to protect from other processors
                                    overwritting location in memory.
                                    ;
                                35  Domenic Andella 6-Jan-1986      Version 9.1
                                    More mp mods required in routine DSI$TIMSRV to support
                                    Scorpio Ap. The Ap should only reset the timer, and exit
                                    ;
                                36  Bob Bergazzi    15-May-1986     Version 10.1                    ;G:2
                                    Made TODR_BIAS and TICK_NS global for use by KERNEL module.     ;G:2
                                                                                                    ;G:3
                                    Steven Fortuna  01-Jan-1988     Version 10.11                   ;G:3

Phase	Page faults	CPU Time	Elapsed Time
Initialization	25	00:00:00.01	00:00:00.27
Command processing	931	00:00:00.30	00:00:00.90
Pass 1	974	00:00:03.73	00:00:06.84
Symbol table sort	0	00:00:00.36	00:00:00.37
Pass 2	69	00:00:01.13	00:00:02.06
Symbol table output	2	00:00:00.06	00:00:00.24
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	5	00:00:00.17	00:00:00.29
Assembler run totals	2010	00:00:05.77	00:00:10.98

The working set limit was 2900 pages.
239228 bytes (468 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1241 non-local and 46 local symbols.
1177 source lines were read in Pass 1, producing 104 object records in Pass 2.
47 pages of virtual memory were used to define 44 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	11
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	5
SYS$COMMON:[SYSLIB]LIB.MLB;2	5
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	0
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	0
SYS$COMMON:[SYSLIB]STARLET.MLB;2	21
SYS$COMMON:[SYSLIB]STARLET.MLB;2	0
TOTALS (all libraries)	42

1464 GETS were required to define 42 macros.

There were no errors, warnings or information messages.

```

```
Assembler run totals          1620     00:00:03.36    00:00:06.38

The working set limit was 2400 pages.
130678 bytes (256 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 666 non-local and 9 local symbols.
317 source lines were read in Pass 1, producing 46 object records in Pass 2.
26 pages of virtual memory were used to define 25 macros.
```

0000    112 ;               Fixed HSC50 disk name to show proper unit number.
0000    113 ;
0000    114 ;       18      M. Baggett      6-Jun-1984      Version 7.0
```

```
0000   115 ;                Change device name for RC11/RC25/RCF25 back to DA.
0000   116 ;
0000   117 ;        19      Richard Brown   10-July-1984    Version 7.0
0000   118 ;                Change all references of "RC11" to "LESI".
0000   119 ;
0000   120 ;        20      Jim Shelhamer   1-Oct-1984      Version 7.1
0000   121 ;                Copied HSC50 code ([13] stuff) for multi-digit unit numbers to
0000   122 ;                RA disks section.
0000   123 ;
0000   124 ;        21      Jim Shelhamer   17-Oct-1984     Version 7.1
0000   125 ;                Added support (modelled after D Muse's changes in Attach) to handle
0000   126 ;                long device names for HSC devices.
0000   127 ;
0000   128 ;        22      Domenic Andella 25-Oct-1984     Version 7.1
0000   129 ;                Changed BLSS instruction in routine CON_CI_HSCCI
0000   130 ;                to unsigned BLSSU for comparison of drive # >= 10.
0000   131 ;
0000   132 ;        23      Jim Shelhamer   31-Oct-1984     Version 7.1
0000   133 ;                Changed BLSS instructio in routine CON_UBA_UDA
0000   134 ;                to unsigned BLSSU for comparison of drive # >= 10.
0000   135 ;
0000   136 ;        24      Bob Bergazzi    17-Dec-1984     Version 8.0
0000   137 ;                Fixed CI_NODE ptable to inherit controller letter from
0000   138 ;                CI780 ptable.
0000   139 ;
0000   140 ;        25      Bob Bergazzi    12-June-1985    Version 8.3
0000   141 ;                Add support for auto-config of BDA device ptables.
0000   142 ;
0000   143 ;        26      M. Baggett      12-Aug-1985     Version 8.3
0000   144 ;                Added support for Aurora booting on RDBX1.
0000   145 ;
0000   146 ;        27      Ted Salem       20-Aug-1985     Version 8.3
0000   147 ;                Added code in order to get the HSC port number being used
0000   148 ;
0000   149 ;        28      M. Baggett      3-Sep-1985      VDS     8.3
0000   150 ;                Made symbol AU$K_TYPE global.
0000   151 ;
0000   152 ;        29      Bob Bergazzi    4-Sep-1985      Version 8.3
0000   153 ;                Fix edit 26 (setup R0 with UD_INIT).
0000   154 ;
0000   155 ;        30      M. Baggett      4-Sep-1985      VDS 9.0
0000   156 ;                Set up registers for calling init routines.
0000   157 ;
0000   158 ;        31      Bob Bergazzi    24-Sep-1985     Version 9.0
0000   159 ;                Fixed auto config of UDA50 disk ptable, so that
0000   160 ;                the disk (e.g. DUA0) inherits the controller letter
0000   161 ;                from the DUA ptable. Symptom was reported for KDB50.
0000   162 ;
0000   163 ;        32      Jim Shelhamer   1-OCT-1985      Version 9.0
0000   164 ;                The values returned by the alloc for the CI ptable
0000   165 ;                were being clobbered by the routines to get the
0000   166 ;                pseudo-RPB. See edit 27.

The working set limit was 3400 pages.
255393 bytes (499 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1498 non-local and 95 local symbols.
1529 source lines were read in Pass 1, producing 106 object records in Pass 2.
63 pages of virtual memory were used to define 56 macros.

0000     34 ;**
0000     35 ; FACILITY:     VAX DIAGNOSTIC SUPERVISOR.
0000     36 ;
0000     37 ; ABSTRACT:
0000     38 ;
0000     39 ;       This routine contains the interface with the LSI-11 console.
0000     40 ;       It provides the routines necessary to read and write characters
0000     41 ;       and strings on the operators console.  It contains the limited
0000     42 ;       functionality to interface with QIO.
0000     43 ;
0000     44 ; ENVIRONMENT:
0000     45 ;
0000     46 ;       Operates as part of the Supervisor only in stand-alone.
0000     47 ;       Portions hereof must operate in KERNEL mode.
0000     48 ;
0000     49 ; AUTHOR:
0000     50 ;
0000     51 ;       KEN CHAPMAN     10-NOV-77       VERSION 01.

0000     68 ;       05      Implement P4 buffer in WRITEBLK
0000     69 ;
0000     70 ;       06      Fix IO$_READPROMPT to always prompt on new line
0000     71 ;
0000     72 ;       07      Defer echo of ^C until KB_CHECK but suppress rest of output
0000     73 ;               until ^C is serviced
0000     74 ;
0000     75 ;       08      MARION BAGGETT  NOV 12,1979
0000     76 ;               ADD THE CONTROL S AND CONTROL Q FUNCTION FOR STARTING AND
0000     77 ;               STOPPING THE PRINTOUT ON THE TERMINAL.
0000     78 ;
0000     79 ;       09      Roger Riggs, 14-Jan-1980, Version 5.2
0000     80 ;               Added checking of IO$M_CANCTRLO  on write to terminal.
0000     81 ;               Used by exception to make sure exceptions always print.
0000     82 ;               Also fixed RINPUT to ignore character if bit 15 (ERR) is
0000     83 ;               Set in the data register.
0000     84 ;
0000     85 ;       10      Dave Butenhof, 17-oct-1980, version 6.1
0000     86 ;               Cause re-type of input line ('^R') after asynchronous output
0000     87 ;               occurs, in the fashion of VMS.  Also, remove hyphen line
0000     88 ;               continuation code, since it doesn't belong here.
0000     89 ;
0000     90 ;       11      To fully support ^C 'disable' in tight time-critical code,
```

```
                                0000     91 ;                  cut down on instruction stream for control characters.
                                0000     92 ;                  Specifically, test for ^C first in RINPUT instead of last.
                                0000     93 ;                  Also, make new routine OUT_CNTRL to output ^C and ^O echo;
                                0000     94 ;                  without all the overhead of doing extra KB_POLL each
                                0000     95 ;                  character (small messages), or checking for tabs, etc.
                                0000     96 ;
                                0000     97 ;          12      Dave Butenhof, 17-mar-1981, version 6.3
                                0000     98 ;                  Add VRSETWIDTH routine, and hooks for SET WIDTH command.
                                0000     99 ;                  This allows users (FS in particular) to avoid destroying
                                0000    100 ;                  80 column printer paper with output from DS. Also add
                                0000    101 ;                  VRSHOWWIDTH routine.
                                0000    102 ;
                                0000    103 ;          13      - Jack Stansbury, 22-Oct-1981, Version 6.-
                                0000    104 ;                  Changed SEP Psect to CODE, DATA, and WORK.
                                0000    105 ;                  Also added .LIBRARY statements for $DS and $DIAG.
                                0000    106 ;
                                0000    107 ;          14      - Jack Stansbury, 26-Oct-1981, Version 6.-
                                0000    108 ;                  Fixed more truncation errors....
                                0000    109 ;
                                0000    110 ;          15      - Jack Stansbury, 25-Jan-1982, Version 6.6
                                0000    111 ;                  Changed the WIDTH variable to make it global, so that QA can
                                0000    112 ;                  access it.
                                0000    113 ;
                                0000    114 ;          16      - Jack Stansbury, 23-Mar-1982, Version 6.?
                                0000    115 ;                  Added typecoding to the output messages.
                                0000    116 ;
                                0000    117 ;          17      - Richard Brown, 8-June-82, Version 6.8
                                0000    118 ;                  Addition of support for specification of
                                0000    119 ;                  terminators other than carriage-return.  We will
                                0000    120 ;                  now be functionally equivalent to VMS QIO calls
                                0000    121 ;                  with respect to the optional terminator specification
                                0000    122 ;                  (argument P4) for the terminal driver.
                                0000    123 ;
                                0000    124 ;          18      Bob Bergazzi     6-Aug-82        Version 6.8
                                0000    125 ;                  Added code to change a ^Z into an EXIT command
                                0000    126 ;
                                0000    127 ;          19      Jack Stansbury, 26-Oct-1982, Version 6.9
                                0000    128 ;                  Added code to echo the ^C character only if the
                                0000    129 ;                  DS$V_Ctrl_C_No_Echo bit is clear. If it is set,
                                0000    130 ;                  then ^C's will not be echoed.
                                0000    131 ;
                                0000    132 ;          20      Bob Bergazzi     5-March-1983    Version 6.11
                                0000    133 ;                  Added code to make SET WIDTH work online.
                                0000    134 ;
                                0000    135 ;          21      Bob Bergazzi     8-Apr-1983      Version 6.11
                                0000    136 ;                  Removed incorrectly implemented edit 18.
                                0000    137 ;
                                0000    138 ;          22      Domenic Andella 25-Apr-83        Version 6.11
                                0000    139 ;                  Added code in CMK$TCONSOLE routine to activate
                                0000    140 ;                  11/XXX console terminal line.
                                0000    141 ;
                                0000    142 ;          23      Richard Brown   22-June-83       Version 6.12
                                0000    143 ;                  Added routine SIZE_TERM, which determines
                                0000    144 ;                  console terminal type.
                                0000    145 ;
                                0000    146 ;                  Also removed code in READVBLK that treated a
                                0000    147 ;                  question mark as a terminator, since many
```

```
                                0000   148 ;                terminal IDs contain question marks, and we
                                0000   149 ;                couldn't figure why it was a terminator anyway.
                                0000   150 ;
                                0000   151 ;        24      Bob Bergazzi    Nov. 29,1984    Version 8.0
                                0000   152 ;                Removed edit 22.
                                0000   153 ;
                                0000   154 ;        25      Jim Shelhamer   30 Nov 1984     Version 8.0
                                0000   155 ;                Added code for 11/ZZZ to handle console I/O over
                                0000   156 ;                the BI via the RXCD register.
                                0000   157 ;
                                0000   158 ;        26      Bob Bergazzi    Dec. 14, 1984   Version 8.0
                                0000   159 ;                Added support for DELETE character for video terminals.
                                0000   160 ;                Does a backspace, space, backspace sequence.
                                0000   161 ;
                                0000   162 ;        27      M. Baggett      18-Dec-1984     Version 8.0
                                0000   163 ;                Added terminals ID's for VT101, VT102, VT125 and VT200 family.
                                0000   164 ;                Undefined types are set to VT100.
                                0000   165 ;
                                0000   166 ;        28      Jim Shelhamer   6-Aug-1985      Version 8.3
                                0000   167 ;                Added check for sys$output being mailbox on
                                0000   168 ;                SET WIDTH command processing.
                                0000   169 ;
                                0000   170 ;        29      M. Baggett      14-Aug-1985     Version 8.3
                                0000   171 ;                Ignore console data bits for AURORA only.
                                0000   172 ;
                                0000   173 ;        30      Ted Salem       1-Oct-1985      Version 9.0
                                0000   174 ;                Changed RSB to RET in order to do a proper return
                                0000   175 ;                from an MP entry QIO call.
                                0000   176 ;
                                0000   177 ;        31      Jim Shelhamer   7-Oct-1985      Version 9.0
                                0000   178 ;                Added setting of bit 7 in R0 when data is recv'd
                                0000   179 ;                from RXCD to indicate data gotten.
                                0000   180 ;
                                0000   181 ;        32      M. Baggett      22-Oct-1985     Version 9.0
                                0000   182 ;                Restore changes so Ctrl z, etc work on AURORA.
                                0000   183 ;                Renumber some local labels.

00C5                 608 ;++
00C5                 609 ; FUNCTIONAL DESCRIPTION:
00C5                 610 ;
00C5                 611 ;       THIS ROUTINE CHECKS THE 'READY' BIT IN THE CONSOLE'S STATUS
00C5                 612 ;       REGISTER AND, IF CLEAR, RETURNS TO THE CALLING ROUTINE.
00C5                 613 ;       If no character is ready this returns immediately.
00C5                 614 ;       Select one of the following based on the character typed:
00C5                 615 ;       ^C      clear local flags and set the global ^C flag
00C5                 616 ;               set ^O flag to suppress output until ^C is serviced by KB_CHECK
00C5                 617 ;       ^O      toggle the ^O bit (output may be flushed based on this bit)
00C5                 618 ;       ^S      SET CONSFLG FLAG TO SUSPEND TERMINAL OUTPUT
00C5                 619 ;       ^Q      CLEAR CONSFLG FLAG TO RESUME TERMINAL OUTPUT IF ANY
00C5                 620 ;       ^C      WILL ALSO CLEAR CONSFLG FLAG.

The working set limit was 2400 pages.
134492 bytes (263 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 646 non-local and 85 local symbols.
1370 source lines were read in Pass 1, producing 59 object records in Pass 2.
51 pages of virtual memory were used to define 41 macros.

0000    33 ; ABSTRACT:
0000    34 ;       This module contains the bootstrap device driver for the
0000    35 ;       console TU58.
0000    36 ;
0000    37 ; ENVIRONMENT:  IPL 31, kernel mode, code must be PIC
0000    38 ;
0000    39 ; AUTHOR:  Steve Beckhardt,     Creation Date:  1-Nov-1979
0000    40 ;
0000    41 ; MODIFIED BY:
0000    42 ;
0000    43 ;       12      Amy Iorio       June 6, 1985    Version 8.3
0000    44 ;               Branched around halt in do_mapping.
0000    45 ;
0000    46 ;       11      Bob Bergazzi    May 16, 1983    Version 6.11
0000    47 ;               Changed the order of the .LIB statements.
0000    48 ;
0000    49 ;       10      Marion Baggett, 15-Jul-1982, Version 6.9
0000    50 ;               Increased the timeout value so loading of QALOAD for QA-ing
0000    51 ;               can be done on ZAPPA comet.
0000    52 ;
0000    53 ;       09      - Dave Butenhof, 23-Mar-1982, version 6.7
0000    54 ;               Now that TU58 hardware is fixed (Nebula), remove some
0000    55 ;               hack code
0000    56 ;
0000    57 ;       08      - Dave Butenhof, 10-Feb-1982, version 6.6
```

```
0000     58 ;                  Fix driver to work correctly on Nebula.  This is mainly
0000     59 ;                  a matter of allowing some leeway in READY/DONE bit polling
0000     60 ;                  loops to allow console to do something.  Also allow ^C
0000     61 ;                  termination of long TU-58 reads.
0000     62 ;
0000     63 ;          V02-007 KTA0037         Kerbey T. Altmann       26-Oct-1981
0000     64 ;                  Fix start and size to encompass the entire driver.
0000     65 ;
0000     66 ;          02-006  STJ0125         Steven T. Jeffreys      30-Jul-1981
0000     67 ;                  Added support of MRSP protocol.  For an explantion of the
0000     68 ;                  TU58's operation, including RSP and MRSP protocol, please
0000     69 ;                  see the "TU58 Engineering Specification", document number
0000     70 ;                  TU58-0-0.
0000     71 ;
0000     72 ;          02-005  TCM0002         Trudy C. Matthews       29-Jul-1981
0000     73 ;                  Changed all "7ZZ"s to "730"s.
0000     74 ;
0000     75 ;          02-004  TCM0001         Trudy C. Matthews       12-Jun-1981
0000     76 ;                  Altered XMIT_TWO_CHARS routine to work on 11/730 processor,
0000     77 ;                  which requires that the high 3 bytes of the value moved to
0000     78 ;                  PR$_CSTD be zero.  Corrected bug in DO_MAPPING routine.
0000     79 ;                  Added CONSDD_START label to mark start of driver.
0000     80 ;
0000     81 ;          02-003  SRB0001         Steve Beckhardt         10-Jul-1980
0000     82 ;                  Fixed bugs in change CAS0001
0000     83 ;

                                0048   279 ; There are 4 possibilities concerning mapping:  the I/O can be
                                0048   280 ; done virtual or physical (MODE(AP)) and we can be executing virtual
                                0048   281 ; or physical (contents of processor register PR$_MAPEN).  If both
                                0048   282 ; modes match, then we can just copy data to/from the user buffer.
                                0048   283 ; If the I/O is to be done virtual and we are executing physical
                                0048   284 ; then the buffer address has to be translated using the page table
                                0048   285 ; pointed to by R1.  If the I/O is to be done physical and we are
                                0048   286 ; executing virtual then we have to double map the buffer using a spare
```

```
                        0048   287 ; PTE.  At this point, we just compute a mapping switch in R11 as follows:
                        0048   288 ;
                        0048   289 ;       0       Both modes match, just copy the data
                        0048   290 ;       1       Do virtual -> physical translation using page table
                        0048   291 ;       -1      Do physical -> virtual mapping using a spare PTE

```
The working set limit was 2400 pages.
132768 bytes (260 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1150 non-local and 26 local symbols.
673 source lines were read in Pass 1, producing 76 object records in Pass 2.
24 pages of virtual memory were used to define 21 macros.
```

```
The working set limit was 2900 pages.
61946 bytes (121 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 476 non-local and 36 local symbols.
767 source lines were read in Pass 1, producing 40 object records in Pass 2.
17 pages of virtual memory were used to define 15 macros.

Symbol table output	2	00:00:00.00	00:00:00.00
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	4	00:00:00.01	00:00:00.04
Assembler run totals	1382	00:00:01.57	00:00:03.74

The working set limit was 1900 pages.
43684 bytes (86 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 431 non-local and 9 local symbols.
328 source lines were read in Pass 1, producing 36 object records in Pass 2.
8 pages of virtual memory were used to define 7 macros.

```
                                  +----------------------------+

Cross-reference output              11     00:00:00.02    00:00:00.06
Assembler run totals              1885     00:00:04.12    00:00:07.40

The working set limit was 2400 pages.
148416 bytes (290 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1158 non-local and 10 local symbols.
174 source lines were read in Pass 1, producing 76 object records in Pass 2.
23 pages of virtual memory were used to define 22 macros.

                        0000    56 ;       03      Changed SS$_ARITH TO DS$_ARITH
                        0000    57 ;       04      Various enhancements and cleanup done.
```

```
0000     58 ;                'NEXT [n]' command.
0000     59 ;        05      Added code to restore opcode on hidden breakpoint
0000     60 ;        06      Modified FETCH_STORE to correctly report address on
0000     61 ;                COMET machine checks
0000     62 ;                Roger Riggs     29-NOV-1979
0000     63 ;        07      Added BSBW SCRIPT$STOP before call to CLI to halt script
0000     64 ;                mechanism on breakpoints and single step.
0000     65 ;                Dave Butenhof  16-JAN-80
0000     66 ;        08      Add code to examine/deposit internal processor registers.
0000     67 ;                Roger Riggs, 27-May-1980, Version 5.4
0000     68 ;        09      Changed radix on processor register output to hex.
0000     69 ;
0000     70 ;                Dave Butenhof, 30-sep-1980, Version 6.1
0000     71 ;        10      Make PSL typeout unaffected by /WORD or /BYTE.
0000     72 ;                Also change /ASCII to use !AF FAO directive, and also type
0000     73 ;                the longword in hex to aid in decoding non-printing strings.
0000     74 ;                Dave Butenhof, 23-feb-1981, version 6.3
0000     75 ;        11      fix truncation errors
0000     76 ;
0000     77 ;        12      - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     78 ;                Fixed truncation errors. Also added .LIBRARY statements
0000     79 ;                for $DS and $DIAG.
0000     80 ;
0000     81 ;        13      - Jack Stansbury, 10-Nov-1981, Version 6.-
0000     82 ;                Added routines for VRSHOWBASE (to show the base address)
0000     83 ;                and VRSHOWDFLT (to show the default size and radix). Also
0000     84 ;                changed the error messages to mixed case.
0000     85 ;
0000     86 ;        14      - Richard Brown, 19-May-82, Version 6.8
0000     87 ;                Addition of routine to process the DEBUG user command.
0000     88 ;
0000     89 ;        15      - Domenic Andella, 17-Jul-84, Version 7.0
0000     90 ;                The 'DEP' command does a write followed by
0000     91 ;                read to display the data written. This causes
0000     92 ;                a mchk on VENUS when depositing a one into
0000     93 ;                the Unibus Adapter Control Register (UACR),
0000     94 ;                and could cause similar problems in other
0000     95 ;                new CPU's. Problem solved by removing the
0000     96 ;                final examine from the 'DEPOSIT' command.
0000     97 ;                This makes VDS consistent with the DEPOSIT
0000     98 ;                command in XDELTA and DEBUG.
0000     99 ;
0000    100 ;        16      Domenic Andella, 4-Apr-1985     Version 8.2
0000    101 ;                Add mod to COND_DEBUG to call MP$_STOP_EVERYTHING
0000    102 ;                if mp system.
0000    103 ;
0000    104 ;
0000    105 ;        17      Ted Salem       23 April-1985   Version 8.2
0000    106 ;                Interlocked COND_DEBUG.
0000    107 ;
0000    108 ;        18      Ted Salem       6-May-1985      Version 8.2
0000    109 ;                Added code in order to Examine and Deposit from and
0000    110 ;                to an AP.
0000    111 ;
0000    112 ;        19      Domenic Andella 22-May-1985     Version 8.2
0000    113 ;                Add code in COND_DEBUG to support breakpoints in a
0000    114 ;                multi-processing system. This edit changes #16.
```

```
0000    115 ;
0000    116 ;       20      Jim Baranski    24-June-1985    Version 8.3
0000    117 ;               Add code in VREXAMINE, VRDEPOSIT, VRSETBRK, VRCLRBRK,
0000    118 ;               for /BASE:temp_base & /NOBASE.

0000    149 ;               Modified DBG_TBIT subroutine so the call to     ;G:6
0000    150 ;               RBREAK_IN is performed after the call to FETCH_ ;G:4
0000    151 ;               STORE.  This permits the actual opcode to be shown ;G:4
0000    152 ;               while stepping through a program instead of '03' ;G:6
0000    153 ;               (the opcode for Breakpoint). Also added another call ;G:4
0000    154 ;               to RBREAK_IN in case the BBCC command does branch. ;G:4
0000    155 ;               This way the breakpoints will be reinserted.    ;G:4
0000    156 ;                                                               ;G:4
0000    157 ;       28      David Gearin    12-Feb-1987     Version 10.8    ;G:5
0000    158 ;               Added sub-routines SAVE_SCB_VECTORS and RESTORE_SCB_VECTORS ;G:5
0000    159 ;               to override a diagnostic program's exception handler during ;G:5
0000    160 ;               an examine or deposit command.                  ;G:5
0000    161 ;                                                               ;G:5
0000    162 ;               Steven Fortuna  11-May-1987     Version 10.8    ;G:6
0000    163 ;               Add output lines to print the Base and Offset when a show ;G:6
0000    164 ;               break is entered or a break point is hit.  Also add the ;G:6
0000    165 ;               capability to modify the break points Base addres and offset ;G:6
0000    166 ;               by entering the SET BREAK/BASE=.... command.  No symptom ;G:6
0000    167 ;               ovserved.                                       ;G:6
0000    168 ;                                                               ;G:7
0000    169 ;               Steven Fortuna  12-May-1987     Version 10.8    ;G:8
0000    170 ;               Add Parameters to pass the base address and offset of ;G:8
0000    171 ;               breakpoints to MPCOMMON so Ap breakpoint message would ;G:7
```

```
0000   172 ;                be consent with Primary breakpoint message.                    ;G:7
0000   173 ;                No symptom ovserved.                                           ;G:7
0000   174 ;                                                                               ;G:8
0000   175 ;                David Gearin    Sept-15-1987    Version 10.10                  ;G:8
0000   176 ;                Added an external variable, ds$gl_ipr_value                    ;G:8
0000   177 ;                This variable will be used to store ipr values to              ;G:8
0000   178 ;                be used by bliss routines.                                     ;G:8
0000   179 ;                                                                               ;G:9
0000   180 ;                Steven Fortuna  12-Jan-1988     Version 10.11                  ;G:11
0000   181 ;                Add an error output message to be displayed, and               ;G:11
0000   182 ;                the clearing of the NEX bit in the Bus Error Register          ;G:11
0000   183 ;                when non-existent I/O addresses are access by an               ;G:9
0000   184 ;                Examine command under VDS.                                     ;G:9
0000   185 ;                Symptom:  As reported-When examing non-existent I/O addresses  ;G:9
0000   186 ;                VDS expects a machine check but only gets "0" return and       ;G:9
0000   187 ;                the setting of the NEX bit in the Bus Error Register.          ;G:9
0000   188 ;                                                                               ;G:9
0000   189 ;                Steven Fortuna  05-Feb-1988     Version 10.11                  ;G:11
0000   190 ;                Add support for three NBIA'S for the examine command problem,  ;G:10
0000   191 ;                mention above.                                                 ;G:10
0000   192 ;                                                                               ;G:9
0000   193 ;                Steven Fortuna  18-Mar-1988     Version 10.11                  ;G:11
0000   194 ;                Fixed a bug with the examine command that occured because      ;G:11
0000   195 ;                of edit 9.                                                     ;G:11
0000   196 ;                SYMPTOM:  Errors to I/O space were occuring before the actual  ;G:11
0000   197 ;                datum of the EXAMINE command was executed. Thus the datum of   ;G:11
0000   198 ;                the EXAMINE command did not match the error's output address   ;G:11
0000   199 ;                when a machine check occured.                                  ;G:11
0000   200 ;                SOLUTION:  Do a Fetch with the datum of the EXAMINE command    ;G:11
0000   201 ;                first, that way if an error occurs it will be with the actual  ;G:11
0000   202 ;                address to be examined.  If successful do the routine          ;G:11
0000   203 ;                CHCK_TO_SEE_IF_IO_SPACE.                                       ;G:11
0000   204 ;                                                                               ;G:11
0000   205 ;--                                                                            ;G:6

Performance indicators

Phase	Page faults	CPU Time	Elapsed Time
Initialization	25	00:00:00.03	00:00:00.20
Command processing	930	00:00:00.36	00:00:01.87
Pass 1	947	00:00:03.91	00:00:06.66
Symbol table sort	0	00:00:00.25	00:00:00.26
Pass 2	61	00:00:01.53	00:00:03.23
Symbol table output	2	00:00:00.07	00:00:00.17
Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	7	00:00:00.38	00:00:00.59
Assembler run totals	1976	00:00:06.53	00:00:12.98

The working set limit was 2900 pages.
219676 bytes (430 pages) of virtual memory were used to buffer the intermediate code.
There were 50 pages of symbol table space allocated to hold 860 non-local and 164 local symbols.
2740 source lines were read in Pass 1, producing 102 object records in Pass 2.
46 pages of virtual memory were used to define 38 macros.

Macro library statistics

```
The working set limit was 2900 pages.
159281 bytes (312 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1055 non-local and 20 local symbols.
404 source lines were read in Pass 1, producing 73 object records in Pass 2.
28 pages of virtual memory were used to define 27 macros.
```

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1

```
The working set limit was 1900 pages.
53950 bytes (106 pages) of virtual memory were used to buffer the intermediate code.
There were 10 pages of symbol table space allocated to hold 175 non-local and 7 local symbols.
185 source lines were read in Pass 1, producing 30 object records in Pass 2.
17 pages of virtual memory were used to define 15 macros.
```

```
;    0058  0     !                 Dave Butenhof, 18-mar-1981, version 6.3
;    0059  0     !          01     Allow ODS subdirectory support under user mode.
;    0060  0     !                -Dave butenhof, 02-Jun-1981, version 6.3
;    0061  0     !          02     Change library specs for more flexibility
;    0062  0     !                 - Dave butenhof, 26-Jun-1981, version 6.4
;    0063  0     !          03     Fix to use BOO$QIO instead of DSP$XX_READ (the latter does
;    0064  0     !                 not do error retries, nor does it handle errors well).
;    0065  0     !          04     - Dave Butenhof, 31-aug-1981, version 6.5
;    0066  0     !                 Support DQ device type (IDC disks) for Nebula.  Disks are
;    0067  0     !                 R80 and RI02.
;    0068  0     !          05     - dave butenhof, 16-Sep-1981, version 6.5
;    0069  0     !                 Fix directory so unattached device results in 'nice' error
;    0070  0     !                 message, not general RMS$_DEV.
;    0071  0     !
;    0072  0     !          06     - Jack Stansbury, 22-Oct-1981, Version 6.-
;    0073  0     !                 Fixed a truncation error by changing the PSECT declarations to
;    0074  0     !                 conform to the .MAR file's PSECT's.
;    0075  0     !
;    0076  0     !          07     - Dave Butenhof, 26-Oct-1981, Version 6.-
;    0077  0     !                 Alter call to LOC$PTABLE to include adapter address
;    0078  0     !                 argument.
;    0079  0     !
;    0080  0     !          08     - Dave Butenhof, 12-Jan-1982, Version 6.6
;    0081  0     !                 Set up Control C trap in DIRECTORY routines; this will allow
;    0082  0     !                 closing of any open files.
;    0083  0     !
;    0084  0     !          09     - Dave Butenhof, 25-Jan-1982, Version 6.6
;    0085  0     !                 Use DSR$ALLOCATE_PSEUDO_RPB routine instead of explicit init.
;    0086  0     !
;    0087  0     !          10     - Dave Butenhof, 03-Feb-1982, Version 6.6
;    0088  0     !                 Add ability to check filespec against (wildcarded) argument
;    0089  0     !                 before typing.  This is almost free, since the checking
;    0090  0     !                 routine exists in HELP already for checking keywords.  All
;    0091  0     !                 we need here is minimal pre-parsing to add 'implicit
;    0092  0     !                 wildcards', and the code to call the compare routine.
;    0093  0     !
;    0094  0     !          11     Dave Butenhof, 15-Apr-1982
;    0095  0     !                 Add UDA50 disk support.
;    0096  0     !
;    0097  0     !          12     Dave Butenhof, 24-May-1982
;    0098  0     !                 Add TM78 support (by removing special case code which disallows
;    0099  0     !                  TU78)
;    0100  0     !
;    0101  0     !          13     M. Baggett,     9-March-1983, Version 6.11
;    0102  0     !                 Added support for CI-HSC50 and RC25/RCF25.
;    0103  0     !
;    0104  0     !          14     Bob Bergazzi    May 17, 1983    Version 6.11
;    0105  0     !                 Changed the order of searching the libraries.
;    0106  0     !          15     M. Baggett      11-Oct-1983     Version 6.13
;    0107  0     !                 Added support for CI-HSC50 magtape.
;    0108  0     !
;    0109  0     !          16     Bob Bergazzi    April 13, 1984  Version 7.0
;    0110  0     !                 Added support for ZZZ console storage device in ODS format.
;    0111  0     !                 to DSX$DIRECTORY routine.
;    0112  0     !
;    0113  0     !          17     Bob Bergazzi    May 21, 1984    Version 7.0
;    0114  0     !                 Added support for DIR/WIDE, which displays the directory
```

```
;    0115  0     !                 1 filename per line. This avoids the truncation of
;    0116  0     !                 long filenames under VMS V4.
;    0117  0     !
;    0118  0     !       18        RE MUSE          22 MAY,1984     Version 7.0
;    0119  0     !                 increased buffer size to handle long filenames for VMS v4
;    0120  0     !
;    0121  0     !       19        M. Baggett       2-Nov-1984      version 7.1
;    0122  0     !                 Added support for TK50. Suppress re-inits for DIRECTORY
;    0123  0     !
;    0124  0     !       20        M. Baggett       26-NOV-1984     Version 8.0
;    0125  0     !                 Added support for RUX50 devices.
;    0126  0     !
;    0127  0     !       21        J. Shelhamer     18 Dec, 1984    Version 8.0
;    0128  0     !                 Fixed bug with Directory for RT-11 devices. A pattern match was
;    0129  0     !                 looking for a version number (wild-carded).
;    0130  0     !
;    0131  0     !       22        M. Baggett       1-Jun-1985      Version 8.3
;    0132  0     !                 Added support for ultrix disk files.
;    0133  0     !
;    0134  0     !       23        Bob Bergazzi     20-Aug-1985     Version 8.3
;    0135  0     !                 Added support for AAA console storage device in ODS format.
;    0136  0     !                 to DSX$DIRECTORY routine.
;    0137  0     !
;    0138  0     !       24        M. Baggett       27-Aug-1985     Version 9.0
;    0139  0     !                 Added support for RD52, RD53.
;    0140  0     !                                                                                !G:2
;    0141  0     !       25        Ted Salem        7-April-1986    Version 10.0                    !G:2
;    0142  0     !                 Added support to the Console on ANDROMEDA.                      !G:2
;    0143  0     !                                                                                !G:11
;    0144  0     !       26        Ingrid Martin / Steve Meier                                     !G:6

                        0000     62 ;         11         Removed deallocate from cleanup code.
                        0000     63 ;                    Cancel ^O before calling summary  and end pass message
                        0000     64 ;                    Dave Butenhof   15-feb-80
                        0000     65 ;         12         Add hooks for 'ERROR SEARCH' function
                        0000     66 ;                    Roger Riggs,    12-Mar-1980
                        0000     67 ;         13         Added call to INITSCB and reset memory management after cleanup
                        0000     68 ;                    also call QIO$CLEANUP only if program is SEP_FUNCTIONAL
                        0000     69 ;
                        0000     70 ;                    Dave Butenhof   30-jun-1980, version 5.5
                        0000     71 ;         14         Correct word displaced mode to longword displaced
                        0000     72 ;         15         Support DS RMS by calling cleanup routine to avoid
                        0000     73 ;                    cluttering pool space in case of errors
                        0000     74 ;
                        0000     75 ;                    Dave Butenhof, 03-oct-1980, version 6.1
                        0000     76 ;         16         Change some more word-relative references to longword relative
                        0000     77 ;         17         Clear DS$V_CTRLC bit before doing $DS_CNTRLC call; this is to
                        0000     78 ;                    prevent probably undesired control C at next call to KB_CHECK,
                        0000     79 ;                    if control C's were disabled by previous program.
                        0000     80 ;                    Dave Butenhof, 29-dec-1980, version 6.2
                        0000     81 ;         18         More word relative references to longword.  This is getting
                        0000     82 ;                    quite un-fun.
                        0000     83 ;                    Dave Butenhof, 17-feb-1981, version 6.3
                        0000     84 ;         19         More of same.  ALL DSA$?_? references this time.
                        0000     85 ;         20         - dave butenhof, 06-Oct-1981, version 6.5
                        0000     86 ;                    Add SHOW STATUS command
                        0000     87 ;         21         - Dave Butenhof, 02-Nov-1981, version 6.-
                        0000     88 ;                    Fix truncation errors
```

```
0000     90 ;        22      - Jack Stansbury, 03-Nov-1981, Version 6.-
0000     91 ;                Added calls to QA$Main for the QA enhancements. Also fixed
0000     92 ;                some truncation errors. Also changed PSECTs a bit. Added
0000     93 ;                .LIBRARY statements for $DS, $DIAG, and LIB.
0000     94 ;
0000     95 ;        23      - Dave Butenhof, 16-Nov-1981, version 6.5
0000     96 ;                Modified the text (and corrected a bug) in the SHOW STATUS
0000     97 ;                command.
0000     98 ;
0000     99 ;        24      - Dave Butenhof, 19-Nov-1981, version 6.5
0000    100 ;                Modify to use typecodes on all output messages.
0000    101 ;
0000    102 ;        25      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000    103 ;                Commented out several of the calls to QA_MAIN because it
0000    104 ;                appears as though they will not be needed for the 6.5 DS
0000    105 ;                version. Made several other small code changes to the DISPATCH
0000    106 ;                routine for QA.
0000    107 ;
0000    108 ;        26      - Jack Stansbury, 21-Nov-1981, Version 6.5
0000    109 ;                Changed DSX$ENDPASS routine slightly to accomadate QA.
0000    110 ;
0000    111 ;        27      - Jack Stansbury, 16-Dec-1981, Version 6.6
0000    112 ;                Added the DS_QADEFS macro definition.
0000    113 ;
0000    114 ;        28      - Dave Butenhof, 29-Dec-1981, Version 6.6
0000    115 ;                Print out all error counts on Summary command.
0000    116 ;
0000    117 ;        29      - Jack Stansbury, 6-Jan-1982, Version 6.6
0000    118 ;                Changed EndPass routine slightly to accomodate the
0000    119 ;                new way of implementing QA (with the QA Start Loop).
0000    120 ;
0000    121 ;        30      - Dave Butenhof, 12-Jan-1982, Version 6.6
0000    122 ;                Fix EndPass message to avoid losing end of message on
0000    123 ;                narrow screen.
0000    124 ;
0000    125 ;        31      - Jack Stansbury, 15-Jan-1982, Version 6.6
0000    126 ;                Made changes to the Dispatch routine for the Loop on Subtest
0000    127 ;                QA check routine.
0000    128 ;
0000    129 ;        32      - Jack Stansbury, 9-Mar-1982, Version 6.6
0000    130 ;                Inserted some new DS macros that will help these routines
0000    131 ;                be more understandable.
0000    132 ;
0000    133 ;        33      Marion Baggett, 9-Apr-1982, Version 6.7
0000    134 ;                Added NoShow Conditionals after the .IDENT
0000    135 ;
0000    136 ;        34      Dave Butenhof, 20-Apr-1982, Verison 6.7
0000    137 ;                Add kluge code in DS_CLEANUP; if standalone on 730,
0000    138 ;                reset IDC to prevent extra interrupts.
0000    139 ;
0000    140 ;        35      Jack Stansbury, 13-September-1982, Version 6.9
0000    141 ;                Fixed some truncation errors. I didn't mark those that I fixed.
0000    142 ;
0000    143 ;        36      Jack Stansbury, 15-September-1982, Version 6.9
0000    144 ;                Changed the VRSummary and VRShowStatus routines to call the
0000    145 ;                DSR$CheckLoad routine defined in ShowMem.
0000    146 ;
```

```
0000    147 ;       37      Jack Stansbury, 8-Mar-1983, Version 6.11
0000    148 ;               Changed the VRShowStatus routine to look for the user's PC
0000    149 ;               on the stack (in the CLI args).
0000    150 ;
0000    151 ;       38      Amy Iorio, 7-January-1985, Version 8.0
0000    152 ;               Added error message to be reported when subtest requested
0000    153 ;               which is greater than the number of existing subtests.
0000    154 ;
0000    155 ;       39      Amy Iorio, 9-January-1985, Version 8.0
0000    156 ;               Changed FMTLSTPAS in order to print
0000    157 ;               pass counts greater than 100,000 out.
0000    158 ;
0000    159 ;       40      Domenic Andella, 18-Mar-1985, Version 8.2
0000    160 ;               Add call in DS_CLEANUP to MP$_DEALL_MEMORY
0000    161 ;               to check for and deallocate any mp memory.
0000    162 ;
0000    163 ;       41      Amy Iorio, 8-May-1985, Version 8.2
0000    164 ;               Fix to loop-on-subtest.
0000    165 ;
0000    166 ;       42      Domenic Andella, 11-Dec-1985    Version 9.1
0000    167 ;               Add external symbol MP$_DEALL_MEMORY
0000    168 ;
0000    169 ;       43      Bob Bergazzi    16-May-1986     Version 10.1                    ;G:2
0000    170 ;               Cancel /TIME in DS_CLEANUP.                                     ;G:2
0000    171 ;                                                                               ;G:4
0000    172 ;               Daniel Li       19-Oct-1987     Version 10.10                   ;G:4
0000    173 ;               Commented out move subtno inst. in EndPass routine to print     ;G:4
0000    174 ;               correct subtest# of last test in the error on subtest message.  ;G:4
0000    175 ;                                                                               ;G:4
0000    176 ;               Paul McCarron   4-Feb-1988      Version 10.11                   ;G:5
0000    177 ;               Added calls to DSX$DEALLOCATE to make DISPAT compatible         ;G:5
0000    178 ;               with changes in allocation in DSX$PRINTREV.                     ;G:5
0000    179 ;                                                                               ;G:5
0000    180 ;               Paul McCarron   11-Feb-1988     Version 10.11                   ;G:6
0000    181 ;               Fixed copyright date to 1988                                    ;G:6
