;    0162  1      !
;    0163  1      !       This routine is called from the CLI module. It sets the specified
;    0164  1      !       QA flag to the requested value (within limits).
;    0165  1      !
;    0166  1      ! CALLER(S):
;    0167  1      !
;    0168  1      !       CLI
;    0169  1      !
;    0170  1      ! FORMAL PARAMETERS:
;    0171  1      !
;    0172  1      !       R2 - Points to the CLI data table base.
;    0173  1      !
;    0174  1      ! IMPLICIT INPUTS:
;    0175  1      !
;    0176  1      !       Cli_Base [CLI$L_FLAGS] - Indicates which flag to change.
;    0177  1      !       Cli_Base [CLI$L_DATA]  - Indicates the new desired value of the flag.
;    0178  1      !
;    0179  1      ! IMPLICIT OUTPUTS:
;    0180  1      !
;    0181  1      !       New value(s) for the QAx variables declared above.
;    0182  1      !
;    0183  1      ! COMPLETION CODES:
;    0184  1      !
;    0185  1      !       0 - Failure, value out of range.
;    0186  1      !       1 - Success.
;    0187  1      !
;    0188  1      ! SIDE EFFECTS:
;    0189  1      !
;    0190  1      !       Changes the value of the specifed flag, iff the value requested is
;    0191  1      !       within range.

;    0033  0      ! ABSTRACT:
;    0034  0      !
;    0035  0      !       This module contains the support routines required to perform QA on diagnostic programs.
;    0036  0      !
;    0037  0      ! AUTHOR:
;    0038  0      !
;    0039  0      !       Jack Stansbury
;    0040  0      !
;    0041  0      ! CREATION DATE:
;    0042  0      !
;    0043  0      !               15-October-1981, Version 6.5-00
;    0044  0      !       00      Put in code for all the support routines plus the following check routines: QA$Normal_Start,
;    0045  0      !               QA$Multiple_Pass, QA$Loop_On_Test, QA$Run_Backwards.
```

```
;    0047  0      ! MODIFIED:
;    0048  0      !
;    0049  0      !       01      Jack Stansbury, 14-December-1981, Version 6.6
;    0050  0      !               Added remaining QA check routines. Split QA.B32 into two different modules: QAMAIN.B32
;    0051  0      !               (this one) and QACHECKS.B32. While this one contains the support routines, the latter contains
;    0052  0      !               the actual check routines.
;    0053  0      !
;    0054  0      !       02      Jack Stansbury, 5-Jan-1982, Version 6.6
;    0055  0      !               Changed the code in QA$Dump to not print R0 and R1 in the register dump. There is no need to
;    0056  0      !               print these since they are not saved by the CALLx instructions.
;    0057  0      !
;    0058  0      !       03      Jack Stansbury, 1-Feb-1982, Version 6.6
;    0059  0      !               Released the three Supervisors to BSDE to find bugs. This includes all the check routine up to
;    0060  0      !               and including the Error Phase One check.
;    0061  0      !
;    0062  0      !       04      Jack Stansbury, 1-Feb-1982, Version 6.6
;    0063  0      !               Changed the headings on the two table printouts to make the table name more distinctive.
;    0064  0      !
;    0065  0      !       05      Jack Stansbury, 11-Feb-1982, Version 6.6X
;    0066  0      !               Changed the DSX$Branch routine so as to make it compatible with Sam Duncan! He wanted R0 saved
;    0067  0      !               across the branch macro code expansion, so I made significant changes to both the branch macros
;    0068  0      !               (in DIAG.*) and to this branch routine. All of that just for Sam!
;    0069  0      !
;    0070  0      !       06      Jack Stansbury, 27-July-1982, Version 6.9
;    0071  0      !               Changed the spelling of the VDS ^C handler variable.
;    0072  0      !
;    0073  0      !       07      Jack Stansbury, 19-Jan-1983, Version 6.10 (?)
;    0074  0      !               Took out all the references to any of the checks above the Run Backwards check. This
;    0075  0      !               includes taking out the previously entered Error Phase One check. It doesn't work
;    0076  0      !               properly with subroutines in diagnostic programs.
;    0077  0      !
;    0078  0      !       08      Bob Bergazzi    May 17, 1983    Version 6.11
;    0079  0      !               Changed the order of searching libraries.
;    0080  0      !--

;    0401  1      %SBTTL 'DSX$BRANCH'
;    0402  1
;    0403  1      GLOBAL ROUTINE DSX$Branch (Register_0, Branch_Code, Error_Number, Branch_Value) : Call_DSX$Branch =
;    0404  1
;    0405  1      !++
;    0406  1      ! FUNCTIONAL DESCRIPTION:
;    0407  1      !
;    0408  1      !       This global routine is called by the $DS_Branch macros. It decides if the branch should be taken.
;    0409  1      !       If the QA flag is set, it will call QA$Main, which calls the appropriate check routine. NOTE:
;    0410  1      !       This routine preserves R1 and attempts to preserve R0 when not forcing an error. At most, the low
;    0411  1      !       bit of R0 will be changed.
;    0412  1      !
;    0413  1      ! FORMAL PARAMETERS:
;    0414  1      !
;    0415  1      !       Register_0    : The general register R0.
;    0416  1      !
;    0417  1      !       Branch_Code   : A literal defining what type of branch is being executed by the diagnostic.
;    0418  1      !
;    0419  1      !       Error_Number  : A diagnostic error number.
;    0420  1      !
;    0421  1      !       Branch_Value  : The value that will determine whether or not the branch should actually be taken.
;    0422  1      !
;    0423  1      ! CALLER(S):
;    0424  1      !
;    0425  1      !       The diagnostic program.
;    0426  1      !
;    0427  1      ! IMPLICIT INPUTS:
;    0428  1      !
;    0429  1      !       NONE
;    0430  1      !

;    1456  1      ! FUNCTIONAL DESCRIPTION:
;    1457  1      !
;    1458  1      !       Find the user's last call frame by following the linked list
;    1459  1      !       of call frames. Find the first call frame whose saved PC is
;    1460  1      !       less than the starting location of the Supervisor. This should
;    1461  1      !       insure that that call frame was put on the stack when the user
;    1462  1      !       called a Supervisor service routine. This called frame will
;    1463  1      !       contain the saved PC, AP, FP, PSW, perhaps some of the general
;    1464  1      !       registers, and (indirectly) the SP.
;    1465  1      !
;    1466  1      ! CALLER:
;    1467  1      !
;    1468  1      !       QA$Dump - to find the call frame so it can print the debugging
;    1469  1      !                 information.
;    1470  1      !
;    1471  1      ! FORMAL PARAMETERS:
;    1472  1      !
;    1473  1      !       Frame_Start - will contain the starting location of the
;    1474  1      !                     found call frame.
;    1475  1      !

0000     63 ;        08    John Ciukaj     5-May-80        Version 5.4
0000     64 ;
0000     65 ;                Added Dummy return for QIO related calls
0000     66 ;
0000     67 ;              Dave Butenhof   18-jun-1980,    version 5.5
0000     68 ;        09    Remove all dummy returns from this module, and move to
0000     69 ;              new module VMSDUMMY.
0000     70 ;              Roger Riggs, 10-Aug-1980
0000     71 ;        10    Use QIO driver prefix from controller instead of device
0000     72 ;              this allows for terminals to be connected to more than
0000     73 ;              one type of Async controller.  The first prefix
0000     74 ;              encountered while linking back through the P-tables is
0000     75 ;              used.
0000     76 ;
0000     77 ;        11    - Jack Stansbury, 22-Oct-1981, Version 6.-
0000     78 ;              Fixed truncation errors. Also added .LIBRARY statements
0000     79 ;              for $DS and $DIAG. Also changed .PSECT SEP to WORK, CODE,
0000     80 ;              and DATA where appropriate.
0000     81 ;
0000     82 ;        12    - Jack Stansbury, 12-Nov-1981, Version 6.-
0000     83 ;              Changed the HALTD to HALT.
0000     84 ;
0000     85 ;        13    Marion Baggett, 9-Apr-1982, Version 6.7
0000     86 ;              Added .NoShow Conditionals after .IDENT statement.
0000     87 ;
0000     88 ;        14    Jack Stansbury, July 1, 1982, Version 6.8
0000     89 ;              Added the 'real' Exe$PwrTimChk routine.
0000     90 ;
0000     91 ;        15    Marion Baggett, 24-Sept-1982, Version 6.9
0000     92 ;              Changed the CASE instruction since WRITEVBLK and READVBLK
0000     93 ;              are to far away and a JMP was need.
0000     94 ;
0000     95 ;        16    Richard E. Muse, 9 January, 1984, Version 6.14
0000     96 ;              Added $PRDEF macro definition - VMS Version 4 change.
0000     97 ;
0000     98 ;        17    Domenic Andella, 9-Apr-1984, Version 6.14
0000     99 ;              Added code in FILL_ACF to handle case where
0000    100 ;              an SBIA is attached, and it is necessary to
0000    101 ;              'backtrack' another level.
0000    102 ;
0000    103 ;        18    Bob Bergazzi    24-Apr-1984     Version 7.0
0000    104 ;                      - Changed FILL_ACF to set up R3 with the CSR
0000    105 ;                        address for the subsequent call to FIND_ADP.
0000    106 ;                      - Changed FIND_ADP routine to compare ADP$L_CSR
0000    107 ;                        instead of ADP$W_TR. This accomodates the VENUS
0000    108 ;                        cpu with multiple SBIs.
0000    109 ;                      - Changed INI_DRADP to add 100 or 300 to SCB_BASE
0000    110 ;                        depending on which SBI the adapter is connected to.
0000    111 ;                      - Removed UBINT... code from INI_UBADP since it
0000    112 ;                        only needs the size of that code (UBINTSZ), which
0000    113 ;                        is defined in ONLY8600.
0000    114 ;
```

```
0000    115 ;       19      Ron Parker      1-NOV-1984
0000    116 ;               - Fixed truncation errors
0000    117 ;
0000    118 ;       20      Bob Bergazzi    Nov. 26, 1984   Version 8.0
0000    119 ;               Added DWBUA to list of known adapter types.
0000    120 ;
0000    121 ;       21      Ted Salem       Feb. 6, 1985    Version 8.1
0000    122 ;               Added code to in order to read and write
0000    123 ;               accross the NI.
0000    124 ;
0000    125 ;       22      Ted Salem       March 19, 1985  Version 8.2
0000    126 ;               Changed EXE$QIO to do a proper return to MP$INTERLOCK.
0000    127 ;
0000    128 ;       24      R.E.Muse        17 June 1985
0000    129 ;               added code to read the nautilus TODR register
0000    130 ;
0000    131 ;       25      J. Baranski     28-Jan-1986
0000    132 ;               Added .EXTERN DS$GK_SID to fix undefined DS$GK_SID.
0000    133 ;                                                                       ;G:2
0000    134 ;       26      Ted Salem       15-May-1986                             ;G:2
0000    135 ;               Made change #18 to be defined as weak                   ;G:2
0000    136 ;                                                                       ;G:4
0000    137 ;       27      Richard E. Muse 28-May-1986                             ;G:4
0000    138 ;               fixed call to ds$load. use dummy buf addr to fool       ;G:4
0000    139 ;               error checking in ds$load so we can get file size.      ;G:4
0000    140 ;                                                                       ;G:6
0000    141 ;       28      Ingrid Martin   13-Mar-1987                             ;G:6
0000    142 ;               Added code so that RRR can read the TODR the same       ;G:7
0000    143 ;               way as Nautilus.                                        ;G:6

0259    670          .SBTTL  QIO$ADDUNIT     Add a unit to the QIO database
0259    671 ;++
0259    672 ; FUNCTIONAL DESCRIPTION:
0259    673 ;
0259    674 ;       This routine takes all the necessary steps to
0259    675 ;       insert a unit into the QIO database, including adding
0259    676 ;       ADP's, CRB's, IDB's, DDB's and UCB's.
0259    677 ;       The generic name of the device is used to locate the
0259    678 ;       device driver for the device.  Starting with the specified
0259    679 ;       device fields are copied from the P-table to the ACF block
0259    680 ;       which contains all the information necessary to build the
0259    681 ;       QIO database.  For unknown devices the unit and vector information
0259    682 ;       is copied. For a TM03 the unit is copied to only one of two fields.
0259    683 ;       For channels, (DR780, RH780 & DW780) the configuration register is set
0259    684 ;       and the ACF is complete. For all non-channel devices this process
0259    685 ;       is repeated for the link device, and then for it's link device...etc.
0259    686 ;       Note that it is impossible to catch the case where the TM03 is
0259    687 ;       omitted from the link chain for a magtape drive... i.e. no
0259    688 ;       error is reported.  Errors are reported if the channel is omitted.

```
Assembler run totals          2313     00:00:08.47    00:00:14.37

The working set limit was 3400 pages.
348441 bytes (681 pages) of virtual memory were used to buffer the intermediate code.
There were 90 pages of symbol table space allocated to hold 1693 non-local and 119 local symbols.
1786 source lines were read in Pass 1, producing 126 object records in Pass 2.
69 pages of virtual memory were used to define 60 macros.
```

```
The working set limit was 2400 pages.
166703 bytes (326 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1171 non-local and 26 local symbols.
743 source lines were read in Pass 1, producing 76 object records in Pass 2.
21 pages of virtual memory were used to define 20 macros.
```

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	0

Psect synopsis output	2	00:00:00.00	00:00:00.00
Cross-reference output	4	00:00:00.06	00:00:00.13
Assembler run totals	1856	00:00:04.89	00:00:08.44

The working set limit was 2900 pages.
220656 bytes (431 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1072 non-local and 26 local symbols.
595 source lines were read in Pass 1, producing 72 object records in Pass 2.
37 pages of virtual memory were used to define 36 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	2
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	11
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0

Assembler run totals	1482	00:00:02.26	00:00:05.26

The working set limit was 1900 pages.
82358 bytes (161 pages) of virtual memory were used to buffer the intermediate code.
There were 20 pages of symbol table space allocated to hold 317 non-local and 23 local symbols.
272 source lines were read in Pass 1, producing 30 object records in Pass 2.
18 pages of virtual memory were used to define 17 macros.

Symbol table output	2	00:00:00.04	00:00:00.13
Psect synopsis output	2	00:00:00.01	00:00:00.15
Cross-reference output	5	00:00:00.17	00:00:00.29
Assembler run totals	1578	00:00:02.76	00:00:06.14

The working set limit was 2400 pages.
84505 bytes (166 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 454 non-local and 33 local symbols.
733 source lines were read in Pass 1, producing 55 object records in Pass 2.
22 pages of virtual memory were used to define 19 macros.

Macro library statistics

                               53 ;       03        DS$LOAD returns changed, reflected by getting SS$_NORMAL
                               54 ;                 Even if file was truncated.
                               55 ;                 Dave Butenhof   28-apr-80
                               56 ;       04        Use $GET and $PUT for input/output if DS run from command file
                               57 ;                 Roger Riggs, 3-Sep-1980, Version 6.0
```

```
                        0000     58 ;       05      Modified SCRIPT$OPEN to use RMS instead of load
                        0000     59 ;
                        0000     60 ;               Dave Butenhof, 10-sep-1980, Version 6.0
                        0000     61 ;       06      Fix user mode RMS GETLINE code to perform case translation
```

```
0000     63 ;        07      - Jack Stansbury, 22-Oct-1981, Version 6.5
0000     64 ;                Fixed truncation errors. Also added .LIBRARY statements for
0000     65 ;                $DS and $DIAG.
0000     66 ;
0000     67 ;        08      - Dave Butenhof, 12-Nov-1981, version 6.5
0000     68 ;                Implement SET VERIFY/CLEAR VERIFY function.  When cleared,
0000     69 ;                this flag will cause command script input not to be echoed.
0000     70 ;                This is basically for the System Functional Text (EVXBB).
0000     71 ;                                                                    ;G:9
0000     72 ;        09      - Dave Butenhof, 17-Nov-1981, version 6.5
0000     73 ;                Implement type code bytes for all prompts.  The type code
0000     74 ;                will not be used in comparison of script file prompts,
0000     75 ;                but will be typed out to console or log file, if BINARY
0000     76 ;                flag is set.
0000     77 ;
0000     78 ;        10      -Jack Stansbury, 18-Dec-1981, Version 6.6
0000     79 ;                Added a little code in SCRIPT$FLUSH that will clear out the
0000     80 ;                QA bit in the DSA flags. This is to insure that QA gets turned
0000     81 ;                off when a Control-C interrupts a diagnostic in a script file,
0000     82 ;                and a non-continuable command (i.e., one that causes the script
0000     83 ;                file to be flushed) is issued. Before, if a START command was
0000     84 ;                issued, and a Control-C was typed, and a subsequent START
0000     85 ;                command was typed, the second one could be screwed up.
0000     86 ;
0000     87 ;        11      -Jack Stansbury, 26-Feb-1982, Version 6.6
0000     88 ;                Added comments to the DS_GETLINE routine to aid in
0000     89 ;                deciphering it.
0000     90 ;
0000     91 ;        12      - Jack Stansbury, 18-Mar-1982, Version 6.?
0000     92 ;                Took out any reference to the TypMsg routine. This is so
0000     93 ;                that type-coding can be added. Also added some new DS macros
0000     94 ;                that should make this more understandable.
0000     95 ;
0000     96 ;        13      Marion Baggett, 31-Mar-1982, Version 6.7
0000     97 ;                Added SYS$LIBRARY:LIB/
0000     98 ;
0000     99 ;        14      Marion Baggett, 8-Apr-1982, Version 6.7
0000    100 ;                Added type coding.
0000    101 ;
0000    102 ;        15      Jack Stansbury, 12-Apr-1982, Version 6.7
0000    103 ;                Added support for the Customer Runnable Diagnostics package.
0000    104 ;
0000    105 ;        16      John Ciukaj,    4-Apr-1983,     version 6.11
0000    106 ;                - Redefined reference to CRD bits in DSA Flags to
0000    107 ;                  distinguish between online and offline
0000    108 ;
0000    109 ;        17      Peter Green,    20-Jul-1983,    version 6.12
0000    110 ;                Added code to support scripting where prompts are
0000    111 ;                printed to the terminal and an answer is given by
0000    112 ;                the user. This is only done when the script prompt
0000    113 ;                ends with "\\".
0000    114 ;
0000    115 ;        18      M. Baggett      25-Jan-1984     Version 6.14
0000    116 ;                Changed dynamic allocation of XAB, FAB, RAB to static form
0000    117 ;                so script files will work.
0000    118 ;
0000    119 ;        19      M. Baggett      8-Feb_1985      Version 8.1
```

```
0000   120 ;               Changed COPY_IT to not change apha characters to uppers
0000   121 ;               case if ULTRIX.
0000   122 ;
0000   123 ;       20      Ted Salem       March 22, 1985  Version 8.2
0000   124 ;               Added interlock code to DS_GETLINE.
0000   125 ;
0000   126 ;       21      M. Baggett      20-June-1985    Version 8.3
0000   127 ;               Change some ULTRIX names.
0000   128 ;
0000   129 ;       22      Amy Iorio       10-July-1985    Version 8.3
0000   130 ;               Put ASK> prompt in for $DSASKxxx macros.
0000   131 ;
0000   132 ;       23      Domenic Andella 25-Sept-1985    Version 9.0
0000   133 ;               Fixed two truncation errors, BSBW's to JSB's
0000   134 ;                                                                       ;G:5
0000   135 ;       24      I. Martin       23-June-1986    Version 10.2            ;G:5
0000   136 ;               Changed literal to symbolic string.                     ;G:3
0000   137 ;                                                                       ;G:7
0000   138 ;       25      Bob Bergazzi    9-Oct-1986      Version 10.4            ;G:7
0000   139 ;               Fixed previous edit.                                    ;G:7
0000   140 ;                                                                       ;G:8
0000   141 ;       26      Ingrid Martin   1-Apr-1987      Version 10.8            ;G:9
0000   142 ;               RRR updates (do like nautilus).                         ;G:8
0000   143 ;                                                                       ;G:9
0000   144 ;       27      Bob Bergazzi    15-apr-1987     Version 10.8            ;G:9
0000   145 ;               Removed extra JSB to CLK$RE_INIT because it is already called ;G:9
0000   146 ;               once in the preceding $DS_CLRVEC on the timer vector.  No     ;G:9
0000   147 ;               symptom observed.                                       ;G:9
0000   148 ;--

Command processing	931	00:00:00.31	00:00:00.83
Pass 1	844	00:00:03.40	00:00:06.74
Symbol table sort	0	00:00:00.27	00:00:00.26
Pass 2	19	00:00:00.91	00:00:01.91
Symbol table output	2	00:00:00.06	00:00:00.25
Psect synopsis output	0	00:00:00.00	00:00:00.00
Cross-reference output	5	00:00:00.26	00:00:00.44
Assembler run totals	1840	00:00:05.23	00:00:10.64

The working set limit was 3400 pages.
204019 bytes (399 pages) of virtual memory were used to buffer the intermediate code.
There were 60 pages of symbol table space allocated to hold 1060 non-local and 60 local symbols.
1189 source lines were read in Pass 1, producing 80 object records in Pass 2.
74 pages of virtual memory were used to define 56 macros.

Macro library statistics

Macro library name	Macros defined

                                0000     76 ;            13      Changes reflected by new structure of basic loop.
                                0000     77 ;                    i.e. START and RESTART commands call test program directly
                                0000     78 ;                    Roger Riggs             23-OCT-1978     VERSION 07 (ESSAA-5.01)
                                0000     79 ;            14      Changes to VRSTART to support new QIO initialization.
                                0000     80 ;            15      Added code to verify that this program is compatible with
                                0000     81 ;                    this supervisor, via ENV$V_SUPER, Value must match
                                0000     82 ;                    ENV$_SUPER, in DIAG. Updated when supervisor interface
                                0000     83 ;                    changes REQUIRE diagnostic changes.
                                0000     84 ;                    Roger Riggs     4-Sept-1979
                                0000     85 ;            17      Removed check of APT flag during start command
                                0000     86 ;                    Roger Riggs, 14-Feb-1980, Vervsion 5.2
                                0000     87 ;            18      Changed so program will not be started if QIO initialization
                                0000     88 ;                    fails, QIO has already printed the error message.
                                0000     89 ;                    Roger Riggs, 12-Mar-1980, Version 5.3
                                0000     90 ;            19      In VRABORT or DSX$ABORT change mode back to kernel before
                                0000     91 ;                    doing cleanup but after the abort message is printed
                                0000     92 ;                    Roger Riggs, 5-Jun-1980, Version 5.4
                                0000     93 ;
                                0000     94 ;            20      Added code to change mode and stack back to kernel
                                0000     95 ;                    before calling cleanup as a result of start.
```

```
                        0000     97 ;       21      - dave butenhof, 09-Sep-1981, version 6.-
                        0000     98 ;               It is desirable, under APT, and if program error had
                        0000     99 ;               occured, to have ABORT leave machine state intact, for
                        0000    100 ;               purposes of isolating error.  Add special code to skip
                        0000    101 ;               INIT_CONTEXT and CLEANUP calls if in APT mode and error
                        0000    102 ;               flag set.
                        0000    103 ;
                        0000    104 ;       22      - Marion Baggett 80-oct-1981 Version 6.-
                        0000    105 ;               Added new entry point to support command SHOW SUPPORT
                        0000    106 ;
                        0000    107 ;       23      - Jack Stansbury, 21-Oct-1981, Version 6.-
                        0000    108 ;               Added calls to QA$MAIN for the QA enhancement.
                        0000    109 ;               Also added .LIBRARY statements for $DS and $DIAG.
                        0000    110 ;
                        0000    111 ;       24      - Jack Stansbury, 22-Oct-1981, Version 6.-
                        0000    112 ;               Fixed truncation errors.
                        0000    113 ;
                        0000    114 ;       25      - Jack Stansbury, 26-Oct-1981, Version 6.-
                        0000    115 ;               Changed most of the error messages to mixed case
                        0000    116 ;               (as per government affirmative action regulations)!
                        0000    117 ;
                        0000    118 ;       26      - Dave Butenhof, 19-Nov-1981, version 6.-
                        0000    119 ;               Add type codes to printouts
                        0000    120 ;
                        0000    121 ;       27      - Jack Stansbury, 16-Nov-1981, Version 6.5
                        0000    122 ;               Added the VRSHOWSECTIONS routine.
                        0000    123 ;
                        0000    124 ;       28      - Jack Stansbury, 21-Nov-1981, Version 6.5
                        0000    125 ;               Commented out three of the calls to QA_MAIN because it
                        0000    126 ;               appears they will not be needed for the 6.5 DS version.
                        0000    127 ;
                        0000    128 ;       29      - Jack Stansbury, 5-Jan-1982, Version 6.6
                        0000    129 ;               Added comments to the START routine in preparation for the
                        0000    130 ;               version 30 changes. Also took out the commented-out calls
                        0000    131 ;               to QA_MAIN since I will not be needing them.
                        0000    132 ;
                        0000    133 ;       30      - Jack Stansbury, 6-Jan-1982, Version 6.6
                        0000    134 ;               Added code and moved other code around in the START routine so
                        0000    135 ;               as to facilitate the "QA Start Loop".
                        0000    136 ;
                        0000    137 ;       31      - Jack Stansbury, 15-Jan-1982, Version 6.6
                        0000    138 ;               Changed the FMT_PROG header line so that it would print the
                        0000    139 ;               number of tests on the first line. Only the time appears on the
                        0000    140 ;               second line. This is in keeping with the EndPass message and
                        0000    141 ;               the End-Of-Looping message (in EndSub).
                        0000    142 ;
                        0000    143 ;       32      - Jack Stansbury, 20-Jan-1982, Version 6.6
                        0000    144 ;               Added code to not print the header line if the QA Loop on
                        0000    145 ;               Subtest check was executing and if a flag bit had been cleared.
                        0000    146 ;               This prevents the header line from being output once for every
                        0000    147 ;               subtest in the diagnostic when the Loop on Subtest check
                        0000    148 ;               routine is executing.
                        0000    149 ;
                        0000    150 ;       33      Marion Baggett, 9-Apr-1982, Version 6.7
                        0000    151 ;               Added .NoShow Conditionals after .IDENT , ordered .LIBRARY
                        0000    152 ;               statements. Change DS$PRINTF statement to use type codes
                        0000    153 ;
```

```
0000   154 ;       34      Richard Brown, 30-June-82, Version 6.8
0000   155 ;               Addition of call to MAP_DEBUGGER so repeated STARTs will
0000   156 ;               not wipe out the debugger once it has been loaded.
0000   157 ;               Also, addition of loading debugger before diagnostic is
0000   158 ;               started, if proper flag is set.
0000   159 ;
0000   160 ;       35      Marion Baggett, 24-Sept-82  Version 6.9
0000   161 ;               Fixed truncation error.
0000   162 ;
0000   163 ;       36      Bob Bergazzi    2-Nov-1982      Version 6.9
0000   164 ;               Changed VRSTART so that if we are loaded under APT do not
0000   165 ;               check the DSA$V_LOAD_DEBUGGER flag. APT sets this flag for
0000   166 ;               reasons long since lost. When running under APT, every
0000   167 ;               START would cause the supervisor to try and load the debugger
0000   168 ;               from the console device and cause APT to timeout.
0000   169 ;
0000   170 ;       37      Jack Stansbury, 8-Mar-1983, Version 6.11
0000   171 ;               Changed the abort routines to make sure they print the true
0000   172 ;               (if there is one) user PC.
0000   173 ;
0000   174 ;       38      John Ciukaj     3-May-1983      Version 6.11
0000   175 ;               - Alter Start routine so that an error does not occur
0000   176 ;                 when an ambiguous section name is found AND the section name
0000   177 ;                 is equivalent to the name entered.
0000   178 ;
0000   179 ;       39      Bob Bergazzi    May 16, 1983    Version 6.11
0000   180 ;               Changed the order of the .LIB statements.
0000   181 ;
0000   182 ;       40      Bob Bergazzi    Sep 21, 1983    Version 6.13
0000   183 ;               Added BIN_TIME quadword in PSECT WORK for START/TIME switch.
0000   184 ;               Just before call to DISPATCH, do a $SETIMR if /TIME was given.
0000   185 ;               Commented out for version 6.13 and 6.14, and 7.0
0000   186 ;
0000   187 ;       41      Bob Bergazzi    Jan. 26, 1984   Version 6.14
0000   188 ;               Fixed ABORT so it won't print out VMS system addresses as the
0000   189 ;               user PC.
0000   190 ;
0000   191 ;       42      Ted Salem       Aug. 3, 1984    Version 7.10
0000   192 ;               Added SHOW TESTS command.
0000   193 ;
0000   194 ;       43      Bob Bergazzi    Feb. 26, 1985   Version 8.1
0000   195 ;               Fixed edit [40] (/TIME).
0000   196 ;
0000   197 ;       44      Bob Bergazzi    Mar. 4, 1985    Version 8.1
0000   198 ;               Commented out edit 43.
0000   199 ;
0000   200 ;       45      Amy Iorio       June 17, 1985   Version 8.3
0000   201 ;               clear externals for Printrev
0000   202 ;
0000   203 ;       46      Ted Salem       Oct. 15, 1985   Version 9.0
0000   204 ;               Do above (#45) properly by clearing
0000   205 ;               entire date structure.
0000   206 ;
0000   207 ;       47      J. Baranski     1-Nov-1985      Version 9.1
0000   208 ;               Un Comment Out START/TIME.
0000   209 ;
0000   210 ;       48      M. Baggett      14-Jan-1986     Version 9.1
```

```
0000   211 ;                Stop truncating long device name when starting program
0000   212 ;                                                                        ;G:2
0000   213 ;        49      Domenic Andella 7-Feb-86        Version 10.0            ;G:2
0000   214 ;                For every start or run sequence in an mp system, the    ;G:2
0000   215 ;                primary processor should clear its own interlocking     ;G:2
0000   216 ;                data structures, therefore add jsb to MP$_CLEAR_LOCKS   ;G:2
0000   217 ;                in routine VRSTART. In addition, clear MP$GR_BOOTED_PROCESSORS, ;G:2
0000   218 ;                MP$GR_IDLING_PROCESSORS, MP$GL_FLAGS, and MP$GL_CONDITION_FLAGS. ;G:
0000   219 ;                                                                        ;G:2
0000   220 ;        50      M. Baggett      26-Mar-1986     Version 10              ;G:5
0000   221 ;                Separate device names in list printed after starting test ;G:5
0000   222 ;                with tabs.                                              ;G:5
0000   223 ;                                                                        ;G:5
0000   224 ;        51      M. Baggett      31-Mar-1986     Version 10              ;G:6
0000   225 ;                Fixed so diagnostics run offline.                       ;G:6
0000   226 ;                                                                        ;G:6
0000   227 ;        52      Bob Bergazzi    16-May-1986     Version 10.1            ;G:7
0000   228 ;                Added /TIME changes.                                    ;G:7

Cross-reference output	6	00:00:00.31	00:00:00.50
Assembler run totals	1866	00:00:04.85	00:00:09.21

```
The working set limit was 2900 pages.
202868 bytes (397 pages) of virtual memory were used to buffer the intermediate code.
There were 40 pages of symbol table space allocated to hold 643 non-local and 58 local symbols.
1110 source lines were read in Pass 1, producing 64 object records in Pass 2.
47 pages of virtual memory were used to define 31 macros.
```

```
The working set limit was 2900 pages.
164186 bytes (321 pages) of virtual memory were used to buffer the intermediate code.
There were 80 pages of symbol table space allocated to hold 1365 non-local and 41 local symbols.
795 source lines were read in Pass 1, producing 87 object records in Pass 2.
19 pages of virtual memory were used to define 18 macros.
```

0000    30 ; ABSTRACT:
0000    31 ;       This module contains the bootstrap device driver for
0000    32 ;       MASSBUS TM03 based magtapes (TE16,TU77,TU45)
0000    33 ;
0000    34 ; ENVIRONMENT:  kernel mode
0000    35 ;
0000    36 ; AUTHOR:  Roger Riggs, CREATION DATE:  4-Sep-1980
0000    37 ;
0000    38 ;--
0000    39 ; Modified:
0000    40 ;
0000    41 ;                   Roger Riggs, 22-oct-1980, Version 6.1
0000    42 ;       01          Added code to support IO$_DRVCLR.
0000    43 ;       02          changed RET's to RSB for version 4 interface of Bootdrivr
```

Assembler run totals	1571	00:00:03.57	00:00:06.21

The working set limit was 2900 pages.
136960 bytes (268 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1236 non-local and 12 local symbols.
389 source lines were read in Pass 1, producing 79 object records in Pass 2.
18 pages of virtual memory were used to define 17 macros.

                        318 ; Functional description:
                        319 ;
                        320 ;       This routine performs basic magnetic tape positioning.
                        321 ;       functions are supported for read, rewind, skip files (forward
                        322 ;       backward) and skip records (forward and backward). It also
                        323 ;       support drive clear.  Drive clear must be called before the first
                        324 ;       tape operation as it is necessary to initialize the tape subsystem
                        325 ;       prior to the first position or transfer operation.
                        326 ;       Drive clear initialization clears the Need Buffer Address (NBA)
                        327 ;       bit in the drive. This bit can be reset by a UNIBUS reset/init
                        328 ;       which in the TS11 causes the tape to be rewound. If NBA is set
                        329 ;       the function is rejected with tape position lost.
                        330 ;
                        331 ; Inputs:
                        332 ;
                        333 ;       R3      - base address of adapter's register space
                        334 ;       R5      - LBN for current piece of transfer
                        335 ;       R6      - contains 0
                        336 ;       R7      - Address of devices CSR
                        337 ;       R8      - size of transfer in bytes
                        338 ;       R9      - address of the RPB
                        339 ;       R10     - starting address of transfer (byte offset in first
                        340 ;                 page ORed with starting map register number)
                        341 ;
                        342 ;       FUNC(AP)- I/O operation (IO$_READLBLK or IO$_REWIND only)
                        343 ;       MODE(AP)- Address interpretation mode (0 = physical, 1 = virtual)
                        344 ;       SIZE(AP)- Size of buffer in bytes
                        345 ;       BUF(AP) - Address of buffer
                        346 ;
                        347 ; Implicit inputs:
                        348 ;
                        349 ;       RPB$B_SLAVE     - Slave number of drive
                        350 ;       RPB$W_UNIT      - RPB field containing boot device unit number
                        351 ;
                        352 ;

+-------------------------+
! Performance indicators !
+-------------------------+

Phase	Page faults	CPU Time	Elapsed Time
Initialization	25	00:00:00.03	00:00:00.19
Command processing	929	00:00:00.29	00:00:00.89
Pass 1	708	00:00:02.63	00:00:03.92
Symbol table sort	1	00:00:00.37	00:00:00.37
Pass 2	69	00:00:00.76	00:00:01.53
Symbol table output	2	00:00:00.02	00:00:00.08
Psect synopsis output	2	00:00:00.01	00:00:00.01
Cross-reference output	4	00:00:00.08	00:00:00.11
Assembler run totals	1742	00:00:04.19	00:00:07.10

The working set limit was 2400 pages.
149901 bytes (293 pages) of virtual memory were used to buffer the intermediate code.
There were 70 pages of symbol table space allocated to hold 1303 non-local and 17 local symbols.
606 source lines were read in Pass 1, producing 85 object records in Pass 2.
19 pages of virtual memory were used to define 18 macros.

Macro library statistics

Macro library name	Macros defined
DISK$DS:[DS.LOCAL.RELEASE.WORK]DS.MLB;1	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]DIAG.MLB;1	1
DISK$DS:[DS.LOCAL.RELEASE.WORK]PAMAC.MLB;1	0
SYS$COMMON:[SYSLIB]LIB.MLB;2	5
SYS$COMMON:[SYSLIB]STARLET.MLB;2	7
SYS$COMMON:[SYSLIB]STARLET.MLB;2	0
TOTALS (all libraries)	14

1201 GETS were required to define 14 macros.

There were no errors, warnings or information messages.

;    0825  1
;    0826  1      !++
;    0827  1      ! Functional description:
;    0828  1      !
;    0829  1      ! Addresses stored in inodes are capable of addressing fragments
;    0830  1      ! of several blocks. File system blocks of at most size MAXBSIZE can
;    0831  1      ! be optionally broken into 2, 4, or 8 pieces, each of which is
;    0832  1      ! addressible; these pieces may be DEV_BSIZE, or some multiple of
;    0833  1      ! a DEV_BSIZE unit.
;    0834  1      !
;    0835  1      ! Large files consist of exclusively large data blocks.  To avoid
;    0836  1      ! undue wasted disk space, the last data block of a small file may be
;    0837  1      ! allocated as only as many fragments of a large block as are
;    0838  1      ! necessary.  The file system format retains only a single pointer
;    0839  1      ! to such a fragment, which is a piece of a single large block that
;    0840  1      ! has been divided.  The size of such a fragment is determinable from
;    0841  1      ! information in the inode.  This field  is filled in when the disk
;    0842  1      ! is created.
;    0843  1      !
;    0844  1      ! The file system shows file size at the fragment level;
;    0845  1      ! to determine number of blocks, aligned fragments are examined.
;    0846  1      !
;    0847  1      ! The root inode is the root of the file system.
;    0848  1      ! Inode 0 can't be used for normal purposes and
;    0849  1      ! historically bad blocks were linked to inode 1,
;    0850  1      ! thus the root inode is 2. (inode 1 is no longer used for
;    0851  1      ! this purpose, however numerous dump tapes make this
;    0852  1      ! assumption, so we are stuck with it).
;    0853  1      !

;    0976  1       !
;    0977  1       ! Look at each inode in directory
;    0978  1       !
;    0979  1       ! A directory consists of some number of blocks of DIRBLKSIZ(currently 255)
;    0980  1       ! bytes, where DIRBLKSIZ is chosen such that it can be transferred
;    0981  1       ! to disk in a single atomic operation (e.g. 512 bytes on most machines).
;    0982  1       !
;    0983  1       ! Each DIRBLKSIZ byte block contains some number of directory entry
;    0984  1       ! structures, which are of variable length.  Each directory entry has
;    0985  1       ! a struct direct at the front of it, containing its inode number,
;    0986  1       ! the length of the entry, and the length of the name contained in
;    0987  1       ! the entry.  These are followed by the name padded to a 4 byte boundary
;    0988  1       ! with null bytes.  All names are guaranteed null terminated.
;    0989  1       ! The maximum length of a name in a directory is MAXNAMLEN.
;    0990  1       !
;    0991  1       !  All DIRBLKSIZ bytes
;    0992  1       ! in a directory block are claimed by the directory entries.  This
;    0993  1       ! usually results in the last entry in a directory having a large
;    0994  1       ! direct$w_d_reclen.   If the first entry of  a directory block is free,
;    0995  1       !  then its direct$l_d_ino is set to 0.  Entries other than the first
;    0996  1       ! in a directory do not normally have direct$l_d_ino set to 0.
;    0997  1       !

Assembler run totals	1214	00:00:01.59	00:00:04.23

The working set limit was 2400 pages.
46032 bytes (90 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 439 non-local and 17 local symbols.
241 source lines were read in Pass 1, producing 40 object records in Pass 2.
9 pages of virtual memory were used to define 8 macros.

Assembler run totals	1103	00:00:02.41	00:00:06.63

The working set limit was 2012 pages.
1105 bytes (3 pages) of virtual memory were used to buffer the intermediate code.
There were 10 pages of symbol table space allocated to hold 6 non-local and 1 local symbols.
73 source lines were read in Pass 1, producing 14 object records in Pass 2.
0 pages of virtual memory were used to define 0 macros.

Assembler run totals	1324	00:00:01.32	00:00:03.75

The working set limit was 2400 pages.
40786 bytes (80 pages) of virtual memory were used to buffer the intermediate code.
There were 30 pages of symbol table space allocated to hold 421 non-local and 1 local symbols.
165 source lines were read in Pass 1, producing 36 object records in Pass 2.
8 pages of virtual memory were used to define 7 macros.
